Here Comes Everybody

From Wikipedia, the free encyclopedia

This article is about the book. For the fictional character, see Finnegans Wake.

Here Comes Everybody: The Power of Organizing Without Organizations is a book by Clay Shirky published by Penguin Press in 2008 on the effect of the Internet on modern group dynamics and organization. The author considers examples such as Wikipedia and MySpace in his analysis. Accordingly to Shirky, the book is about "what happens when people are given the tools to do things together, without needing traditional organizational structures".[1]

The title of the work alludes to HCE, a recurring and central figure in James Joyce's *Finnegans Wake*.[2]

OCLC Number	168716646
Dewey Decimal	303.48/33 22
LC Classification	HM851 .S5465 2008

Synopsis and Ideas [edit]

In the book, Shirky recounts how social tools such as blogging software like WordPress and Twitter, file sharing platforms like Flickr, and online collaboration platforms like Wikipedia support group conversation and group action in a way that previously could only be achieved through institutions. In the same way the printing press increased individual expression, and the telephone increased communications between individuals, Shirky argues that with the advent of online social tools, groups can form without the previous restrictions of time and cost. Shirky observes that:

> "[Every] institution lives in a kind of contradiction: it exists to take advantage of group effort, but some of its resources are drained away by directing that effort. Call this the *institutional dilemma*--because an institution expends resources to manage resources, there is a gap between what those institutions are capable of in theory and in practice, and the larger the institution, the greater those costs."[3]

Online social tools, Shirky argues, allow groups to form around activities 'whose costs are higher than the potential value,'[4] for institutions. Shirky further argues that the successful creation of online groups relies on successful fusion of a, 'plausible promise, an effective tool, and an acceptable bargain for the user.'[5] However, Shirky warns that this system should not be interpreted as a recipe for the successful use of social tools as the interaction between the components is too complex.

[NYC] Airbnb in NYC

Should NYC gov legislate to control Airbnb?

A whole new way of renting houses and vacations spots arose when Airbnb came up. An inovative idea and an iconic case study of so-called sharing economy, this community is a marketplace where guests can book spaces from hosts connects people who have space to spare with those who are looking for a place to stay. It's goal, they say: to make people feel home anywhere in the world. But the reality is far less benign, according to a report released by Eric T. Schneiderman, the New York attorney general.

The report will say nearly three-quarters of all Airbnb rentals in

Estonian e-Residency

What is e-Residency?

"e-Residency offers to every world citizen a government-issued digital identity and the opportunity to run a trusted company online, unleashing the world's entrepreneurial potential."

The Republic of Estonia is the first country to offer e-Residency — a transnational digital identity available to anyone in the world interested in administering a location-independent business online. e-Residency additionally enables secure and convenient digital services that facilitate credibility and trust online.
